

Bottom-up solutions. Bottom-line impact.

Whether you're planning, building, upgrading or simply trying to get the most out of your existing mechanical systems (utilities, HVAC, plumbing), the decisions you make will be influenced by many factors. Central Mechanical Wichita understands each of these considerations and develops unique solutions to maximize your bottom line.

From planning and analysis to installation, maintenance and measurement and verification, CMW is intentional about understanding your specific needs. Armed with an in-depth knowledge of mechanical systems, regulatory requirements, construction methods, environmental concerns and funding options, we'll leverage our experience to produce a comprehensive solution from the bottom up.

It's never too early to engage the process. Contact us for help with planning, budgeting and analysis for new and existing facilities or mechanical upgrades. CMW is the only partner you'll need for design, integration, construction, installation and maintenance for the life of your mechanical systems.

Serving diverse markets for more than 20 years.

Central Mechanical Wichita is a full-service mechanical contractor delivering custom solutions and unexpected customer service. Our team is experienced and informed, and works within the boundaries of processes designed for accountability. The bottom line for our clients is maximized efficiency, reliability, sustainability and profitability.

Heart Bypass. A CMW success story.

Situation

A regional heart hospital needing to upgrade its chilled water cooling plant systems reached a crossroads. The infrastructure of the central plant is integral to serving the needs of patients and therefore critical to the success of hospital operations. The major issue facing the hospital was how to totally disconnect all cooling from the building and remove old / install new pumps, piping and chillers with minimum downtime in the middle of the hot summer season.

Solution

Central Mechanical Wichita was engaged as the mechanical contractor for this delicate operation. Each step of the process was carefully planned and coordinated with the hospital and the general contractor. The plan was to shut down the central plant at 6 p.m. on Saturday evening and have the new central plant chillers and pumps running by midnight, a six-hour turnaround. From equipment specification and procurement to system prefabrication, every element was staged to achieve the goal.

Bottom Line

CMW's team had the system replaced, up and running and providing chilled water to the hospital again at 11:30 p.m. Saturday night. This quick turnaround allowed the hospital to continue providing critical patient care without interruption. Additionally, the client avoided more than \$24,000 in temporary chiller costs.

Call CMW to find out what we can do to impact your bottom line.
